Re: Five-Year Report
Fall 2007 Groundwater Monitoring Activities
Former FMC Pesticide Formulation Facility
4 West Washington Avenue
Yakima, Washington

Dear Mr. Cameron:

By the present letter and the enclosed report, FMC Corporation (FMC) is submitting to the United States Environmental Protection Agency (USEPA), the above referenced report dated May 2008, for the former FMC facility located at 4 West Washington Avenue, Yakima, Washington. This report is being submitted in support of the USEPA's five-year review for the site in accordance with the Record of Decision issued for the site by USEPA.

If you have any questions or require additional information, please do not hesitate to contact me at (215) 299-6554.

Sincerely,

Shawn J. Tollin
Manager, Environmental Remediation

Re: Five-Year Report, Fall 2007 Groundwater Monitoring Activities
Former FMC Facility
4 West Washington Avenue
Yakima, Washington

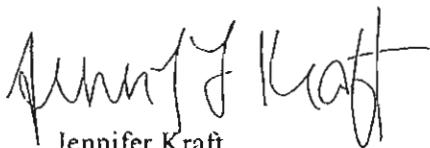

Dear Mr. Tollin:

Enclosed is the *Five-Year Report, Fall 2007 Groundwater Monitoring Activities* for the former FMC Corporation pesticide formulation facility in Yakima, Washington. The report is submitted in support of the United States Environmental Protection Agency (USEPA), Region 10, requirements for Five-Year Review.

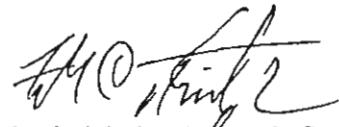

If you have any questions regarding this report, please feel free to contact me in our Walnut Creek, CA office at (925) 941-3723 or Paul Norian at (732) 537-3523.

Sincerely,

PARSONS

1.0 INTRODUCTION

In December 1992, FMC Corporation (FMC) completed a remedial action at the Yakima former pesticide formulation facility in accordance with a United States Environmental Protection Agency (USEPA) Record of Decision (ROD). Since then FMC has conducted a groundwater monitoring program pursuant to the ROD and subsequent agreements between FMC and USEPA. Quarterly monitoring was completed in 1993 through 1996, and semi-annual monitoring was completed in 1997 through 1999. Sampling frequency was subsequently reduced as agreed by FMC and USEPA; sampling was completed during the fourth quarter of 2002, 2003 and 2007. All sampling events have been conducted in accordance with the methods described in the report entitled *Long-Term Monitoring Plan* (ERM, June 1994). Analytical results from previous sampling events are presented in Appendix A. In 2007, the USEPA requested that FMC conduct an additional sampling event to provide data necessary for the second 5-year evaluation as required by the ROD. The objective of this report is to present the groundwater monitoring data collected in October 2007 in support of the FMC and USEPA 5-year review of the groundwater monitoring program and provide discussion for future efforts at the site.

The complete characterization of the former FMC pesticide formulation facility, including historical chemical usage, disposal history, and nature and extent of contamination, was presented in the Phase 2 Remedial Investigation (RI) report completed in 1990 (Bechtel, 1990). Further, additional site characterization data was included in individual operable area closure reports. The implementation of the above-referenced remedial action has been previously documented to EPA.

1.1 Site Background

The historical background and site information presented in this section was adopted from the previous 5-year monitoring report (Secor, 2004).

The former FMC Yakima pesticide formulation facility is located at Four West Washington Avenue (Figure 1), approximately 1 mile east of the Yakima Municipal Airport in Yakima, Washington. The site consists of a 58,000-square-foot fenced area formerly leased from the Union Pacific Railroad. FMC operated the facility from 1951 to 1986. Waste materials and an estimated 2,000 pounds of various chemicals were reportedly dumped in an on-site disposal pit between 1952 and 1969.

A preliminary investigation was conducted for USEPA in 1982, and the site was subsequently placed on the National Priorities List (NPL). An Administrative Order issued by the State of Washington in 1983 required a study of the former disposal pit area. USEPA issued a Consent Order in 1987 requiring a Remedial Investigation/Feasibility Study (RI/FS) for the site. The RI/FS was followed by FMC's removal of the pit contents in two phases between 1988 and 1989. A Superfund ROD was issued in 1990 to specify selected remedies to address residual site contamination. Subsequent remedial actions included removal of additional contaminated soil and

concrete as well as groundwater monitoring. In total, approximately 6,000 cubic yards of soil were removed and disposed offsite, along with the on-site incineration of an additional approximately 3,800 cubic yards of soil. This work was conducted per the approved Remedial Action Work Plan (dated January 30, 1992). In accordance with the ROD, FMC was also required to conduct a five-year groundwater monitoring program to demonstrate the effectiveness of the site remedial actions.

Structures remaining on the site include an office building, a warehouse with loading dock, and a parking lot. Portions of the property were sold by the railroad in 1992 with the remainder of the property being sold in 1997. The site currently contains an active metal fabrication facility and parking lot. Figures 2 and 3 show these structures, the location of the former disposal pit, and groundwater monitoring wells.

1.2 Environmental Setting

The former FMC Yakima site slopes to the southeast with a grade of less than one percent. The property is outside the 500-year flood plain of the Yakima River 1.5 miles east of the site and Wide Hollow Creek, which is approximately 1 mile south of the site. No surface water bodies or wetlands exist on the property. Vegetation within the fenced site is limited to weedy forbs and grasses.

Groundwater from the alluvial aquifer occurs at a seasonally high depth of about 2 to 3 feet below grade and an average depth of 7 to 8 feet below grade. The alluvial aquifer, which extends to 35 to 40 feet below grade, is underlain by cemented basalt.

Groundwater elevations exhibit a five to seven foot seasonal fluctuation at the site. The highest groundwater elevation (999 to 1,002 feet above mean sea level (ft amsl)) typically occurs in September, and the lowest groundwater elevation (995 to 997 ft amsl) occurs in February and March. The groundwater flow direction in the alluvial aquifer is to the southeast. The reported historical horizontal gradient ranges from 0.002 to 0.003 feet per foot (ft/ft). The main source of recharge is from crop irrigation; the source of water is primarily surface water conveyed through canals. Elevated groundwater elevations caused by recharge of irrigation water occurs from May through September each year. Recharge from precipitation, which is minor compared with recharge from irrigation, occurs primarily from January through April.

Three nested sets of wells are present at the site (W-9A/B; W-12A/B; W-8A/B/C). The W-8 nested triplet, which is located between W-7 and W-16, is no longer included in the monitoring plan. At the W-9 and W-12 well pairs, water level measurements indicate a downward vertical groundwater flow gradient. The average vertical gradient is 0.02 ft/ft, downward.

In 1989, an aquifer test was conducted within the alluvial aquifer. Aquifer characteristics were evaluated by conducting an 8-hour aquifer pumping test on W-7. The test was conducted at a discharge rate of 53 gallons per minute (gpm). Distance-drawdown analysis by the Jacob's straight line method resulted in a calculated

transmissivity of 76,300 gpm/ft² and a storativity of 0.19 (ERM, 1998). For an aquifer thickness of 30 feet, calculated hydraulic conductivity is 5,500 gallons per day per square foot (gpd/ ft²). For the alluvial aquifer the seepage velocity is calculated to be 7ft/day. This value is calculated from the hydraulic conductivity estimated from the aquifer test using Darcy's Law ($v=K*i/n$), assuming a volumetric porosity (n) of 0.25, and an average hydraulic gradient (i) of 0.003 ft/ft (Secor, 2004).

1.3 Remedial Objectives

The remedial objective of the groundwater monitoring program is to demonstrate that previous remedial actions on the site have been successful in protecting human health and the environment. The ROD specified soil cleanup levels for dieldrin, endosulfans and DD-series compounds (DDD, DDE, and DDT) along with a number of additional compounds. ROD-specified cleanup levels have been attained for all site soils with the exception of areas discussed in Section 2.0. In addition, the ROD specified a five year groundwater monitoring program to evaluate and confirm contaminant source removal.

In accordance with provisions of the ROD, the Yakima groundwater monitoring program is intended to determine if:

- Health-based concentrations of chemicals are achieved;
- Chemical concentrations show a declining trend; and
- Sources of groundwater contamination have been removed.

When the ROD was issued, pesticide constituents of concern in groundwater were endosulfans and DD-series compounds (DDD, DDE, and DDT). Since the ROD was issued the non-carcinogenic hazard index for endosulfans has been revised, resulting in a new hazard index risk criterion of 200 micrograms per liter (ug/l). The concentration of endosulfans in site groundwater is significantly less than 200 ug/l; however, EPA is requiring the continued monitoring of endosulfan because it is suspected to be an endocrine disrupter. In addition, it had been noted that the endosulfan concentrations in groundwater increased immediately following the removal action.

The 10^{-6} carcinogenic risk (CR) level for dieldrin is 0.004 ug/l, and the CR level for DDT is 0.2 ug/l. By mutual agreement between EPA and FMC, ROD indicator parameters for comparison with historical semi-annual sampling data based on the greater of the CR level and laboratory practical qualification limits (PQLs) are currently as follows:

- Dieldrin at 0.05 ug/l; and
- DDT at 0.2 ug/l.

1.4 Groundwater Monitoring Plan Modifications

To satisfy the remedial objectives, the monitoring plan provided extensive data for the first two years of sampling. However, the well sampling frequency was modified after

the first two sampling events (December 1993 and March 1994) as described in the Long-Term Monitoring Plan. The modifications included:

- Analysis for organochlorine pesticides;
- Abandonment of wells OH-1, OH-2, and OH-3; and
- Installation of replacement wells W-13 (OH-1) and W-14 (OH-2).

Additional modifications to the sampling plan requested by the USEPA in June 1995 included:

- Addition of monitoring well W-7 and W-1 to the sampling events;
- Replacement of damaged and abandoned monitoring well W-11 with W-15;
- Abandonment of monitoring well W-10; and,
- Replacement of previously abandoned monitoring wells W-2, W-3, W-4, W-5 and W-6 with W-16 and W-17.
- Use of low-stress, low-volume sampling techniques.

In January 1996, USEPA and FMC agreed to modify the sampling event frequency to semi-annually following the second quarter 1996 sampling event. Subsequent sampling events occurred during the second and fourth quarters of each year during the weeks of 15 April and 15 October through 1999.

In late November 1996, monitoring well W-15 was irreparably damaged and has since been abandoned. In August 1998, W-18 was installed to monitor groundwater quality downgradient of W-7.

The property to the west of the former FMC facility is now owned by Morton and Sons Nursery. In 1999, monitoring well W-1 was abandoned in accordance with State of Washington regulations to avoid destruction by Morton and Sons Nursery during their development activities.

1.5 Report Organization

In the following sections of this report, an account of the work performed at the Site during the fall 2007 sampling event is given in Section 2.0. Section 3.0 is a discussion of quality assurance / quality control results; Section 4.0 presents a discussion of data evaluation; Section 5.0 is a summary and conclusions; and Section 6.0 provides references. Appendix A presents the available historical groundwater analytical results relevant to the wells in the current monitoring plan. Appendix B contains copies of the well development and groundwater sampling field data sheets. Appendix C contains the surveyor's report. Appendix D contains the analytical laboratory data package for the fall 2007 groundwater sampling event.

2.0 GROUNDWATER MONITORING ACTIVITIES

The following section describes the work performed at the Site during the fall 2007 groundwater monitoring and sampling event. During this period, routine monitoring, reporting, and administrative efforts were completed for the Site, along with general updating of site information. These tasks included:

1. Groundwater level gauging and well assessment;
2. Well development;
3. Surveying of property corners and monitoring wells;
4. Groundwater sampling;
5. Repair top of W-17 casing;
6. New swage-lock caps and keyed-alike locks for all sampled wells;
7. Containment of purge water in drums pending waste profile analysis; and
8. Transportation and disposal of purge water at an appropriate disposal facility

The monitoring, reporting, and administrative efforts were performed in accordance with local and federal regulatory agency requirements. A detailed description of work performed is presented in the following subsections.

2.1 Groundwater Level Measurements

On October 22, 2007, water level measurements were collected in monitoring wells specified in the monitoring program. Groundwater elevation data and contours are presented in Table 2 and on Figure 2, respectively.

2.2 General Site Upkeep

On October 23, 2007, wells included in the sampling schedule were resurveyed in order to confirm spatial locations and casing elevations. These wells were also redeveloped to remove sediment and establish clear screens for reliable and representative groundwater sampling. The wells that were surveyed and developed in 2007 included W-7, W-9B, W-12A, W-12B, W-13, W-14, W-16, W-17, and W-18.

2.2.1 Well Surveying

Prior to surveying the monitoring wells, the physical condition of each well was assessed. As part of this assessment, the locks were replaced on all wells on the sampling schedule and the casing and top of W-17 were repaired. The wells were then resurveyed on October 23, 2007. Top of casing elevations are based on the City of Yakima datum and coordinates are referenced to the Washington State grid system. The new survey findings are presented in Appendix C. The surveyor's map was utilized to generate an updated base map for the site.

2.2.2 Well Development

The nine wells were redeveloped on October 22-24, 2007 using a portable Waterra™

inertial pump system. This development system included a surge block, which was moved up and down at several intervals within the screened areas of the wells. A foot valve attached to the bottom of the surge block allowed water to be vacated out of the well through attached piping. Sediment drawn into the well by the surging action and sediment stirred up from the bottom of the well were purged from the well. Purge water generated during development activities was stored in steel 55-gallon drums and held temporarily on site pending analysis of a waste profiling sample. Following re-development, the wells were allowed to stabilize for approximately one week (greater than the minimum required 24 hours) before the sampling began.

Groundwater monitoring wells W-7, W-12A, and W-12B have 4-inch diameter casings. The other wells in the sampling program are 2-inches in diameter. Well construction information is presented in Table 1.

2.3 *Groundwater Sampling*

2.3.1 Sample Set

During the fall 2007 sampling event, a total of 10 samples were submitted for laboratory analyses. There were nine discrete groundwater samples and one associated quality control sample (field duplicate sample). Quality control samples were consistent with the frequency specified in the Long Term Monitoring Plan (LTMP) (ERM, 1994).

The following groundwater monitoring wells were sampled during the October 2007 sampling event: W-7, W-9B, W-12A, W-12B, W-13, W-14, W-16, W-17 and W-18. The duplicate sample was collected from well W-14 and identified as W-14D. Groundwater samples were collected after well purging and stabilization of field-measured parameters (i.e., temperature and turbidity) in accordance with the LTMP (ERM, 1994). Additional water quality parameters (specific conductivity, dissolved oxygen, pH, and redox potential) were measured and recorded to confirm stability. Appendix B contains copies of the groundwater sample collection forms including field-measured parameters.

2.3.2 Sampling Procedures

The nine monitoring wells were sampled using a peristaltic pump. A sampling tube of new HDPE was lowered into the water to a depth where the intake end was at the middle of the screened zone. Water drawn from the well using the inertial pump system was then directed through a QED MP-20 flow cell where groundwater parameters were monitored. These parameters included: pH, temperature, specific conductivity, ORP, and dissolved oxygen. The instrument has a Purge Alert® that notifies the operator when parameters have stabilized. Samples were collected following stabilization. Manual recording of parameters was performed at approximately 3 minute intervals.

2.3.3 Sample Preparation

Groundwater sampling activities took place on October 29th and 30th, 2007. Samples were collected according to the procedures described in the LTMP (ERM, 1994).

Samples were collected in laboratory-supplied containers. Each sample was stored in a cooler with ice and cooled to approximately 4 degrees Celsius. Standard chain of custody procedures were used with security seals and temperature blanks in each cooler. The laboratory analytical data report is presented in Appendix D.

2.4 Purge Water Management

Well development produced approximately 12 drums of purge water. The process of pre-sample purging for stabilization of groundwater parameters produced an additional partial drum for a total of 13 drums. A composite waste profiling sample was collected by drawing small equal volumes from the drums representing each well. The drums were labeled and held at the site pending analysis of the waste profiling sample which is identified as sample "IDW" in the laboratory report. The drums were removed from the site by Waste Management, Inc., on January 16, 2008 and trucked to Waste Management's evaporation pond facility in Arlington, Oregon, for disposal as a non-hazardous material.

2.5 Well Repair

During the initial site inspection of W-17, the slip cap and top of the PVC casing was found to be broken. The casing was sawed off neatly using a casing cutter and repaired. A lockable swage-lock friction cap was added.

Some of the wells in the sampling plan had simple PVC slip caps and others had swage-lock caps with locks. Worn or damaged swage lock caps were replaced as needed. The old locks were cut off and all caps were converted to the swage-lock type with new keyed-alike locks.

3.0 QUALITY ASSURANCE AND QUALITY CONTROL

The following data quality measures were evaluated to assess the overall quality control of the collected samples and evaluate acceptability of the resulting laboratory analytical data (i.e., usability).

3.1 Justification

None of the data points generated from the October 2007 groundwater sampling event exhibited quality control results that were outside established control limits for specific laboratory quality control measures.

3.2 Completeness

The laboratory data package was received complete. Holding times were met and no unusual problems or complications were encountered within the sample set. Deliverables included data summary reports, completed chain of custody, quantitative results data, and quality assurance data.

3.3 Laboratory Control Limits

Laboratory control limits were compared to the recovery percentage of the surrogate spikes. The spiked sample recoveries were within the specified control limits.

3.4 Qualified Data

The assignment of data qualifiers is made when a laboratory error occurs, or when a sampling error or discrepancy occurs. Validation qualifiers include R, signifying that the data are unusable (rejected) for all purposes, and Q, which indicates that the value is questionable. No data points in the laboratory report were flagged as qualified.

3.5 Field Quality Control

A field quality control sample was collected according to the required 10% frequency as required in the LTMP (ERM, 1994). Sample D-1 on the chain of custody and in the laboratory data package represented the duplicate sample collected from well W-14. The duplicate analysis is designated W-14D in the analytical summary tables, Table 2 and Table 3.

Table 3 shows a comparison of the detections in the two samples including the relative percent difference (RPD) of detected compound concentrations. The calculated RPDs are between 0 and 7.7 percent for results greater than the PQL. This is well within the RPD acceptance range of less than 20 percent for groundwater field duplicate samples given in USEPA guidance for sampling plans (USEPA, 2000).

4.0 DATA EVALUATION

In this section, groundwater monitoring data collected during the October 2007 groundwater sampling event are evaluated relative to the remedial objectives presented in Section 1.3 of this report. Analytical data are summarized in Table 2 and presented in the historical data compilation included as Appendix A.

4.1 Groundwater Elevation and Flow Direction

Depth to groundwater (DTW) was measured within each groundwater monitoring well. Measurements were from the top of the well casing, and the relative groundwater elevation was calculated. Results are listed in Table 2.

Groundwater flow direction is toward the southeast, which is consistent with 2003 observations. Groundwater elevation is contoured in Figure 2. The wells screened within deeper portions of the aquifer (W-7, W-9A and W-12A) were not used in developing the groundwater contours. The groundwater gradient from October 2007 measurements ranged from 0.002 ft/ft to 0.007 ft/ft which is slightly steeper than, but still consistent with, the reported historical range of 0.002 to 0.003 ft/ft (Secor, 2004).

4.2 Analytical Results

This section presents the laboratory analytical results for groundwater samples collected October 29th and 30th, 2007. Figure 2 depicts the groundwater monitoring well locations. A total of 10 samples were collected and submitted for analysis by USEPA Method 8081A for organochlorine pesticides (OCLs).

OCLs were not detected in groundwater samples collected from wells W-7 and W-9B at concentrations above laboratory detection limits. Dieldrin, endosulfan I, endosulfan II, endosulfan sulfate and tection were detected at monitoring wells W-12A, W-12B, W-13, W-14, W-17 and W-18. Only endosulfan I, endosulfan II, endosulfan sulfate were detected in the groundwater sample collected from W-16. Overall, concentrations of site-related constituents were consistent historical observations with some minor fluctuations.

Most notably, the DDT/DDD/DDE group of compounds and aldrin, which were historically present at the site, were not detected in any of the groundwater samples collected in October 2007.

The approximate distribution of total endosulfan, dieldrin, and DDT is shown on Figure 3. Note that total endosulfan is the sum of endosulfan I, endosulfan II, and endosulfan sulfate. Historical concentration versus time graphs for total endosulfans and aldrin plus dieldrin are shown in Figures 4 and 5, respectively.

The historical data plots show concentrations over time at key wells: W-13, W-14, and

W-18 and the wells that they replaced (OH-1, OH-2, and W-11/W-15). Figure 4 indicates a gradually decreasing trend over that last 10 years, for total endosulfans in the center of the site at wells W-13 and W-14. The trend at the downgradient well W-18, has been generally stable since 1995.

5.0 CONCLUSIONS AND RECOMMENDATIONS

The five-year FMC Yakima groundwater monitoring results indicate that site-related constituents continue to be detected in site groundwater.

Dieldrin, endosulfan I, endosulfan II, endosulfan sulfate and tediom were detected above the laboratory PQLs (i.e., positively detected) at groundwater monitoring wells W-12A, W-12B, W-13, W-14, W-6, W-17 and W-18. The PQL is 0.05 ug/L for all compounds except perthane and toxaphene.

The risk-based target concentration for dieldrin is 0.004 ug/L. Dieldrin was detected above the PQL (0.05 ug/L) in W-12A, W-12B, W-13, W-14, W-16, W-17, and W-18 during the fall 2007 sampling event.

Total endosulfan concentrations slightly increased compared to 2003 results at three monitoring wells (W-12A, W-12B, and W-16) and decreased compare to 2003 results at four wells (W-13, W-14, W-17 and W-18); two wells remained below laboratory analytical detection limits (W-7 and W-9B). Total endosulfan was detected in the farthest downgradient well W-18 at a concentration of 1.36 ug/L, which is less than the value of 1.87 ug/L reported in 2003.

Long-term groundwater monitoring results indicate that the lateral extent of total endosulfan detections in groundwater is stable to decreasing. The constituents DDT and aldrin were not detected in any of the wells sampled in October 2007.

Time history graphs of concentrations at key wells indicate that groundwater concentrations of dieldrin and total endosulfans are gradually decreasing at W-13 and W-14 in the vicinity of the former disposal pit. Concentrations are generally lower and stable at the downgradient well, W-18.

It is recommended that another 5-year groundwater monitoring event be performed in 2012 in order to confirm declining concentration trends and support the delisting of this site from the National Priorities List.

It is also recommended to discontinue monitoring at wells W-9B and W-13. W-9B is located cross-gradient from the former disposal pit location and has had no detections in the last two 5-year monitoring events. The data for W-13 exhibits decreasing concentration trends and indicates that W-14 is redundant in function. W-14 is located near W-13, is also downgradient of the former disposal pit, and continues to exhibit similar concentration ranges and trends.

Wells W-9A, W-9B, and W-13 are recommended for abandonment. This would allow the property owner to expand operations and gain more usage from the property.

Toxaphene	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND

Notes

All values are shown in micrograms per liter

ND - Not detected above the laboratory Practical Quantitation Limit (PQL)

PQL for perthane and toxaphene = 1.0 micrograms/liter; PQL for all other compounds = 0.05 micrograms/liter

Analytical work performed by Agricultural & Priority Pollutants Laboratories, Inc., Fresno, California

Table 3*Comparison of Duplicate Samples (Fall 2007)*

Parameter (ug/L)	W-14	W-14D	RPD %	PQL (ug/L)
Dieldrin	0.11	0.11	0.0	0.05
Endosulfan I	0.13	0.14	7.4	0.05
Endosulfan II	0.20	0.20	0.0	0.05
Endosulfan sulfate	0.35	0.34	2.9	0.05
Endrin	0	0	0.0	0.05
Tedion	0.25	0.27	7.7	1.0

NOTE: A zero in the sample results column signifies that the result was not detected above the analytical detection limit.

RPD: Relative Percent Difference calculated by $RPD = \{X_1 - X_2\}/X_{avg} \times 100$ where:

X_1 = concentration of W-14 (original sample)

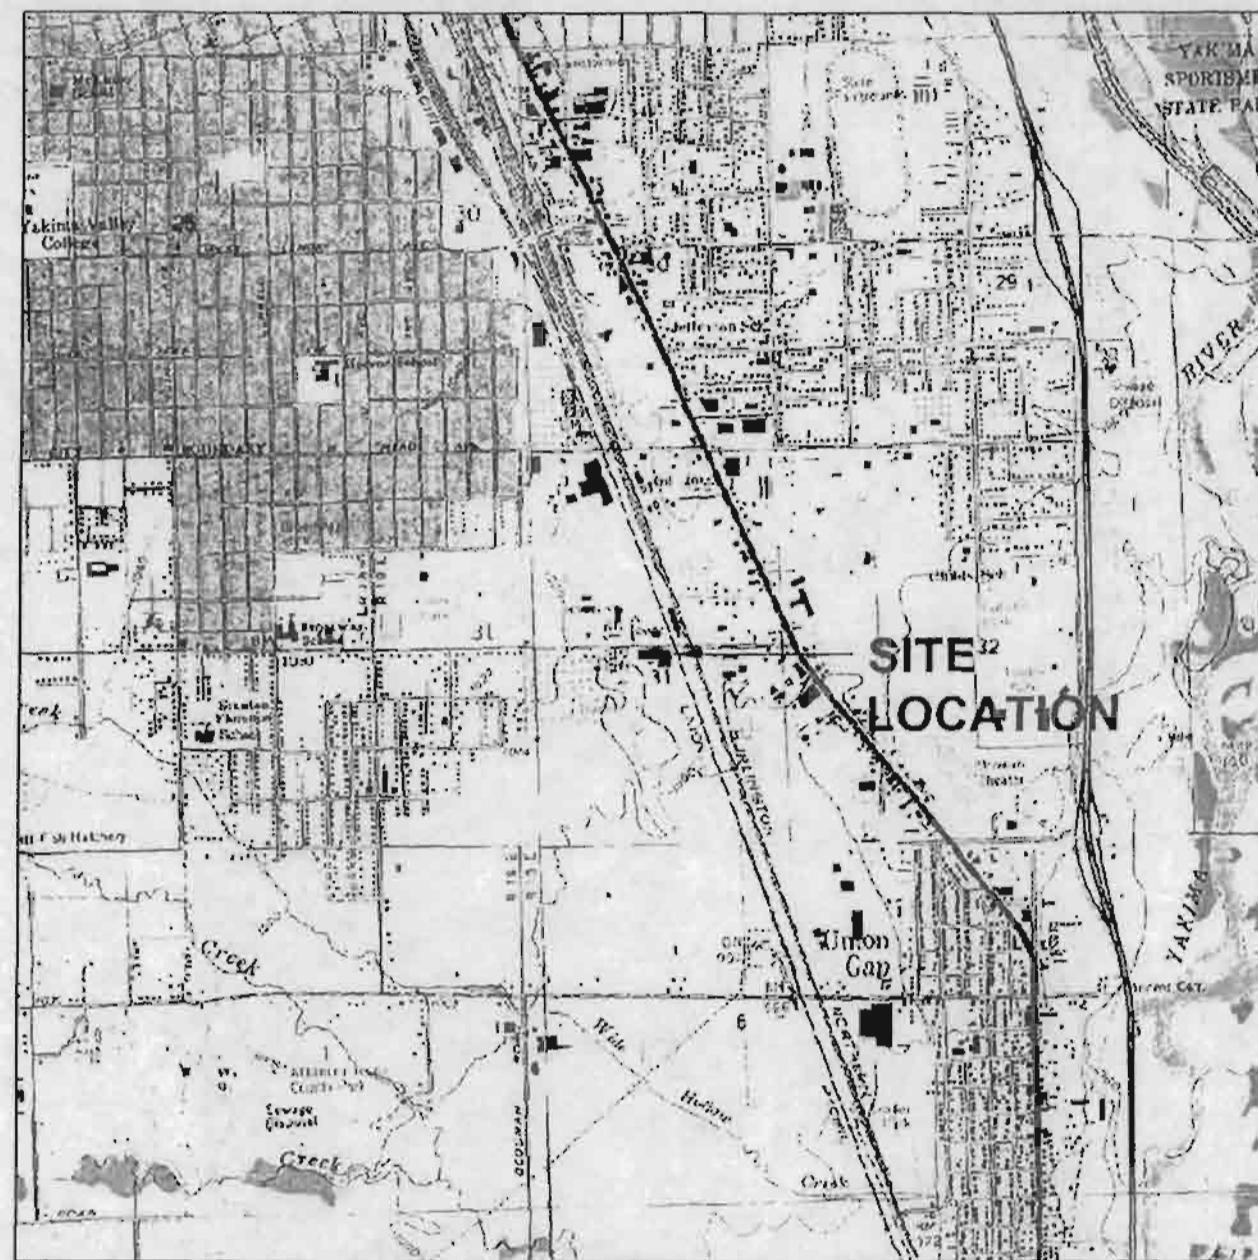

X_2 = concentration of W-14D (duplicate sample)

X_{avg} = average concentration = $(X_1 + X_2)/2$

PQL: Practical Quantitation Limit

Appendix A - Historical Groundwater Analytical Data
(concentrations in micrograms per liter)

All concentrations in micrograms per liter.

Note: A zero in the Sample Results Column signifies that the result was not detected above the analytical detection limit.

Flags:

- J: Estimated value
- P: Analyzed detected, RPD>25%
- Y: Analyzed detected, RPD>40%
- R: The data are unusable (rejected) for all purposes.
- B: Historical data - best available copy is not clear and value is questionable.
- NQ: Not detected above the PQL
- PQL: Practical quantitation limit

Groundwater Sampling and Well Development Field Forms

GROUNDWATER PARAMETER LOG
Well development and Low Flow Sampling

MONITORING WELL IDENTIFICATION NUMBER W-7

Project Name: FMC - Yakima
Project Number: 444071
Location: 4 West Washington Ave., Yakima WA
Sampler: Steven Dopp

Date: 10/29/07
Weather Conditions: CLOUDY 55° F
Wind Speed/Direction: 0.3 mph SW

WELL INFORMATION

Casing Diameter (in):
Top of Casing Elevation: not yet surveyed
Initial Depth to Water: 278' TBC
Wellhead Condition: Good

Groundwater Elevation (ft): 34.5
Depth of Well Casing (ft): 35.1
Actual Purge Volume (liters): 38

PURGING MEASUREMENTS

Water Level Ind. Model & No.:

Solinst Water Level Meter - serial No.10972

ORP/DO Meter Model & No.:

QED model MP20 flow cell - serial No. QD 01063

Purge Equipment Used:

Masterflex Peristaltic Pump, model No. 7570-10 - serial No. K94003730

Sampling Equipment Used

1/4" HDPE tubing

Purge Start Time: 15:54

Sample Collection Time: 16:07

Purge Completion Time: 1/204

Purging Method: Peristaltic pump

Average Purge Rate (ml/min): 3.80

Sample Containers Used: 1 L Amber glass

Analytical Lab: Pacific Agricultural Laboratory

Chemical Analyses: various pesticides

Other Field Observations: 1601 PARAMETERS: STABIL(20)

TURBINE 6' OFF BOTTOM OF WELL (15' SCREEN)

GROUNDWATER PARAMETER LOG
Well development and Low Flow Sampling

MONITORING WELL IDENTIFICATION NUMBER W-13

Project Name: FMC - Yakima
Project Number: 444071
Location: 4 West Washington Ave., Yakima WA
Sampler: Steven Dopp

Date: 10/30/07
Weather Conditions: Sunny 40° F
Wind Speed/Direction: calm

WELL INFORMATION

Casing Diameter (in): 2
Top of Casing Elevation: not yet surveyed
Initial Depth to Water: 2.50
Wellhead Condition: (OK)

Groundwater Elevation (ft): UNKNOWN
Depth of Well Casing (ft): 15.5
Actual Purge Volume (liters): 4.0

PURGING MEASUREMENTS

Water Level Ind. Model & No.:

Solinst Water Level Meter - serial No.10972

ORP/DO Meter Model & No.:

QED model MP20 flow cell - serial No. QD 01063

Purge Equipment Used:

Masterflex Peristaltic Pump, model No. 7570-10 - serial No. K94003730

Sampling Equipment Used

1/4" HDPE tubing

Purge Start Time: 02:57

Sample Collection Time: 10:2

Purge Completion Time: 1089

Purging Method: Peristaltic pump

Average Purge Rate (ml/min): 393

Sample Containers Used: 1 L Amber glass

Analytical Lab: Pacific Agricultural Laboratory

Chemical Analyses: various pesticides

Other Field Observations: BLOWING WITH TUBING 5' OFF BOTTOM OF WELL.
100% PARAFFINS STABILIZED

GROUNDWATER PARAMETER LOG
Well development and Low Flow Sampling

MONITORING WELL IDENTIFICATION NUMBER W-17

Project Name: FMC - Yakima
Project Number: 444071
Location: 4 West Washington Ave., Yakima WA

NELAP Certification number: 05233CA (FTW)

November 21, 2007

Parsons
2121 North California Boulevard, Suite 500
Walnut Creek, California 94596

Attn: Fred Kintzer

Subject: Report of Data: Case 54815

Results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Dear Mr. Kintzer:

Eleven water samples for the "FMC Yakima 444071" project were received November 01, 2007, in good condition. Written results are being provided on this November 21, 2007, for the requested analysis. All holding times were met.

For the EPA 8081A analysis, the samples were extracted according to EPA method 3510C.

No unusual problems or complications were encountered with this sample set.

If you have any questions or require further information, please contact us at your convenience. Thank you for choosing APPL, Inc.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. These test results meet all requirements of NELAC. Release of the hard copy has been authorized by the Laboratory Manager or his designee, as verified by the following signature.
